

FACTS & FIGURES 2010

R
REYNAERS
aluminium

Reynaers Aluminium develops and sells innovative and sustainable aluminium profiles for the building industry. We aim to increase the architectural value and enhance the living and working environment of buildings. Comfort, security, architectural design and energy-efficiency come first in the development of our products.

Reynaers Aluminium owes its leading position to its constant investments in the **research and development** of market-oriented products. Besides **technical information**, Reynaers also offers **personalised marketing tools**. We advise and inspire our different target groups via different kinds of printed and digital documents as well as events and fairs. Thanks to an **advanced logistical approach** the company succeeds in supplying its customers very efficiently. Reynaers satisfies the international **ISO 9001:2000 quality standard**.

We consider **socially responsible entrepreneurship** to be inherent to doing business and have been practising values such as sustainable development, integrity, dialogue, honesty and social commitment from the creation of the company. The installation of 16.000m² solar panels on the roof of our warehouses is a good example of our environmentally-friendly policy.

WE BRING ALUMINIUM TO LIFE

This is our motto. Combined with the creative design of the architect and the craftsmanship of the fabricator, our aluminium systems give buildings a soul.

Thanks to its unique characteristics, aluminium brings buildings to life. A sustainable, colourful and versatile life.

THE REYNAERS INSTITUTE

To support the internal and external exchange of knowledge and information amongst all stakeholders, fabricators, contractors, architects and employees, we have created the Reynaers Institute. It is an international communication platform and source of inspiration that motivates us to join forces and work on the building vision of the future.

You can visit the Reynaers Institute for trainings and seminars, general company visits, demonstrations of machines and testing.

SERVICES

Reynaers Aluminium continuously listens to the requirements and wishes of fabricators, architects, contractors, investors and end-users. We aim to provide them with all the means to work as well and efficiently as possible.

A large range of tools and services is at our customers' disposal:

- Up-to-date technical and commercial information on our website
- Technical trainings, theoretical as well as practical
- Equipment and tooling
- Advice in the automation of the production line
- Software packages for price calculations, designs, orders, etc.
- Sales support (commercial trainings, showroom modules, promotional material, etc.)

We support architects with the following services:

- Reynaers Consult®, a team of people that can give advice during the design process
- Creation of bespoke systems
- Architect catalogues with info about available solutions
- Architectural magazine for inspiration
- Organisation of seminars

PRODUCTS

Reynaers profiles are processed by fabricators and construction companies into windows, doors, sliding modules, conservatories, façades, skylights and sunscreening systems. We provide solutions for all types of architectural styles for both the residential (new build and renovation) and project market (apartments, office buildings, hotels, shopping centres, public buildings, schools, hospitals, etc.).

1. Windows and doors

A wide range of insulated and non-insulated profiles, from which windows and doors can be produced in all sorts of forms and formats, from very small to very large. The systems provide the right solution for various requirements including openings, insulation and security.

2. Curtain walls

A complete range of façade systems, including the implementation of photovoltaic panels, designed to meet all demands of contemporary architecture. From structural glazing to unitised systems that enable large assemblies and glazed elements to be prefabricated and easily installed on site.

3. Sliding systems

A wide variety of high quality sliding systems: from the lightest sliding window to the largest lift-and-slide door, there is a system that fits every application.

4. Conservatories

An extensive range of roof lights, glazed domes and conservatories. Every system offers an optimal technical solution, from simple glass roof constructions to complex conservatories and skylights.

5. Sunscreening systems

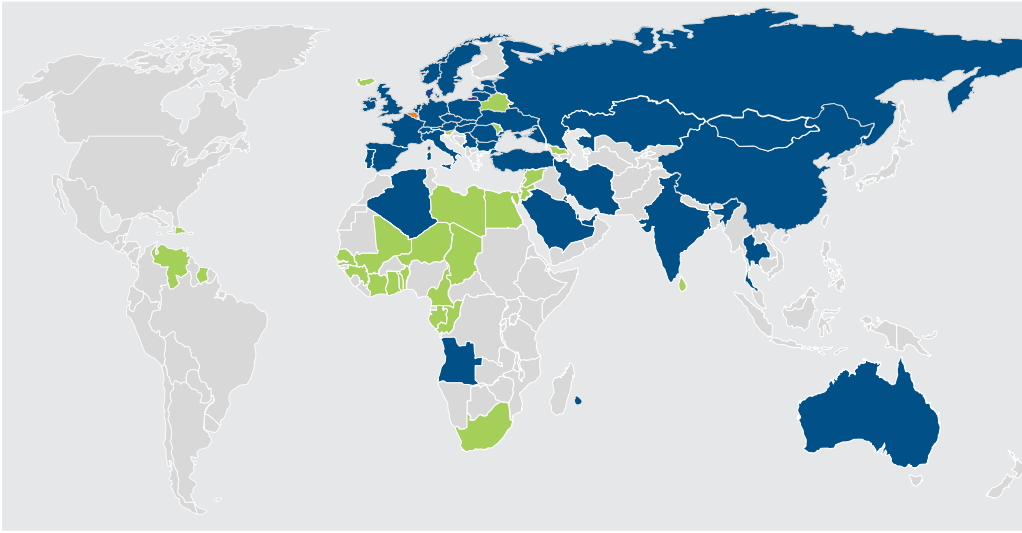

A complete range of horizontal and vertical external shading systems that add an aesthetic dimension and provide protection against solar heating and glare to every building.

6. Peripheral systems

Besides the traditional product groups, Reynaers offers a number of systems designed for a specific application, including balustrades, gates, shutters and insect screens.

INTERNATIONAL PRESENCE

Reynaers Aluminium, established in 1965 is currently present in more than 30 countries and exports to more than 60 countries worldwide.

IMPRESSIVE GROWTH

Aluminium has permanently conquered its place on the market. The Reynaers group has experienced massive growth in the last 20 years. Having grown more than 200% over the last 10 years and with more than 1150 employees working for the group, Reynaers is considered by all players in the industry as one of the leaders in its business. In 2009 the company sold 27 000 tons of aluminium products.
