

Case Study: Tradewinds

Tradewinds

Fenestration systems supplied by Reynaers Aluminium have recently been installed by M Price Ltd on the prestigious Tradewinds project in London's Docklands. Tradewinds is a contemporary high rise residential building that is situated overlooking the Thames Barrier. The project continues the association between Reynaers, Barratt Homes, Wilson Connolly and M Price on high profile developments located along the River Thames.

The products used were Reynaers TS57 dual colour Tilt and Turn windows and dual colour Tilt and Slide doors which provide accessibility to balconies without impeding upon the internal floor space of the apartment. Also used on the project were Reynaers Vision 50 to ground floor areas and Reynaers CW50 curtain walling to communal and staircase areas.

The much sought after penthouse apartments also utilised Reynaers CW50 screens to allow the maximum amount of natural light to enter the penthouse whilst enabling the occupier to take advantage of as much of the panoramic views available as possible.

The ability of the products to meet the functional requirement and to be able to interface with the terracotta and the render of the building, provides an aesthetically superior development to match the stunning location.
